

## Query

How are cached results reused and evicted?

### (a) Candidate passages

|       |                                        |
|-------|----------------------------------------|
| $d_1$ | Repeated queries reuse stored results. |
| $d_2$ | Documents are split into passages.     |
| $d_3$ | Old entries are removed at capacity.   |
| $d_4$ | Cached results serve repeated queries. |

### (b) Facet coverage

|       | Reuse | Eviction |
|-------|-------|----------|
| $d_1$ | 1     | 0        |
| $d_2$ | 0     | 0        |
| $d_3$ | 0     | 1        |
| $d_4$ | 1     | 0        |

1 = covers facet; 0 = does not  
Outlined rows are selected

## Selection rule

One source per facet  
Earliest ID breaks ties

### Selected sources

$$S = \{d_1, d_3\}$$

### (c) Grounded answer

Stored results serve repeated queries. [1]

Old entries are evicted at capacity. [3]
